

Dual Bearing

CENTRIFUGAL PUMP

Applications That Go the Distance.

From dust suppression to fire-fighting systems on water trucks, the Magnum Dual Bearing Centrifugal Pump is your reliable fluid handling solution – where uptime, flow performance and durability matter most.

**Engineered for Performance
Trusted for Reliability**

**Re-engineered for
Modern Efficiency**

Magnum Australia's DUAL BEARING CENTRIFUGAL PUMP

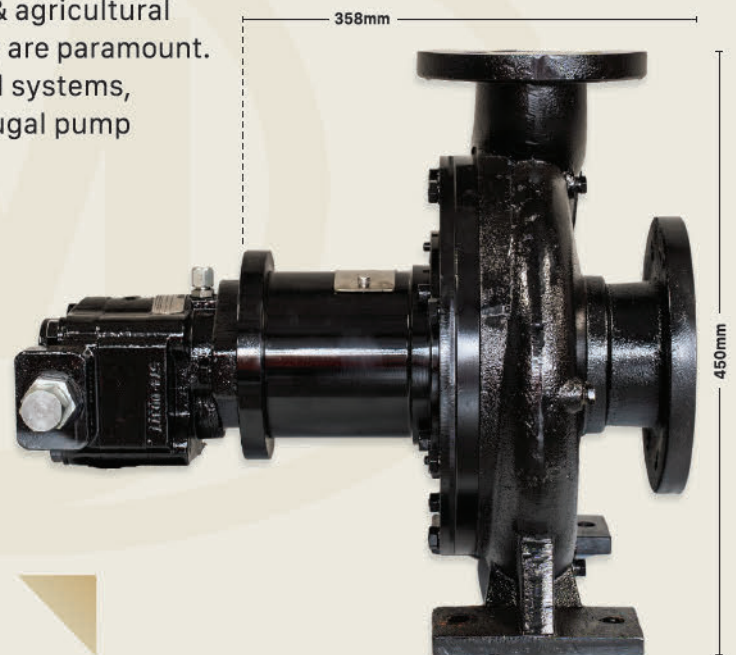

Built for Demanding Applications.

The Magnum Australia Dual Bearing Centrifugal Pump has been specifically designed for commercial, industrial & agricultural operations where performance, reliability & versatility are paramount. Whether you're managing water delivery, mechanical systems, or irrigation infrastructure, this high-quality centrifugal pump is engineered to perform under pressure.

Our latest model features

- **Compact, Lightweight Design**
Re-engineered to reduce weight and minimise mounting footprint without compromising durability, making it ideal for all mobile water truck applications.
- **Dual Bearing System**
Ensures greater stability and extended service life under high-load operating conditions.
- **Enhanced Efficiency**
Optimised impeller and volute design for superior flow rates and energy performance.
- **Operation 3000rpm**

Model: 100 x 65 x 250

Key Applications

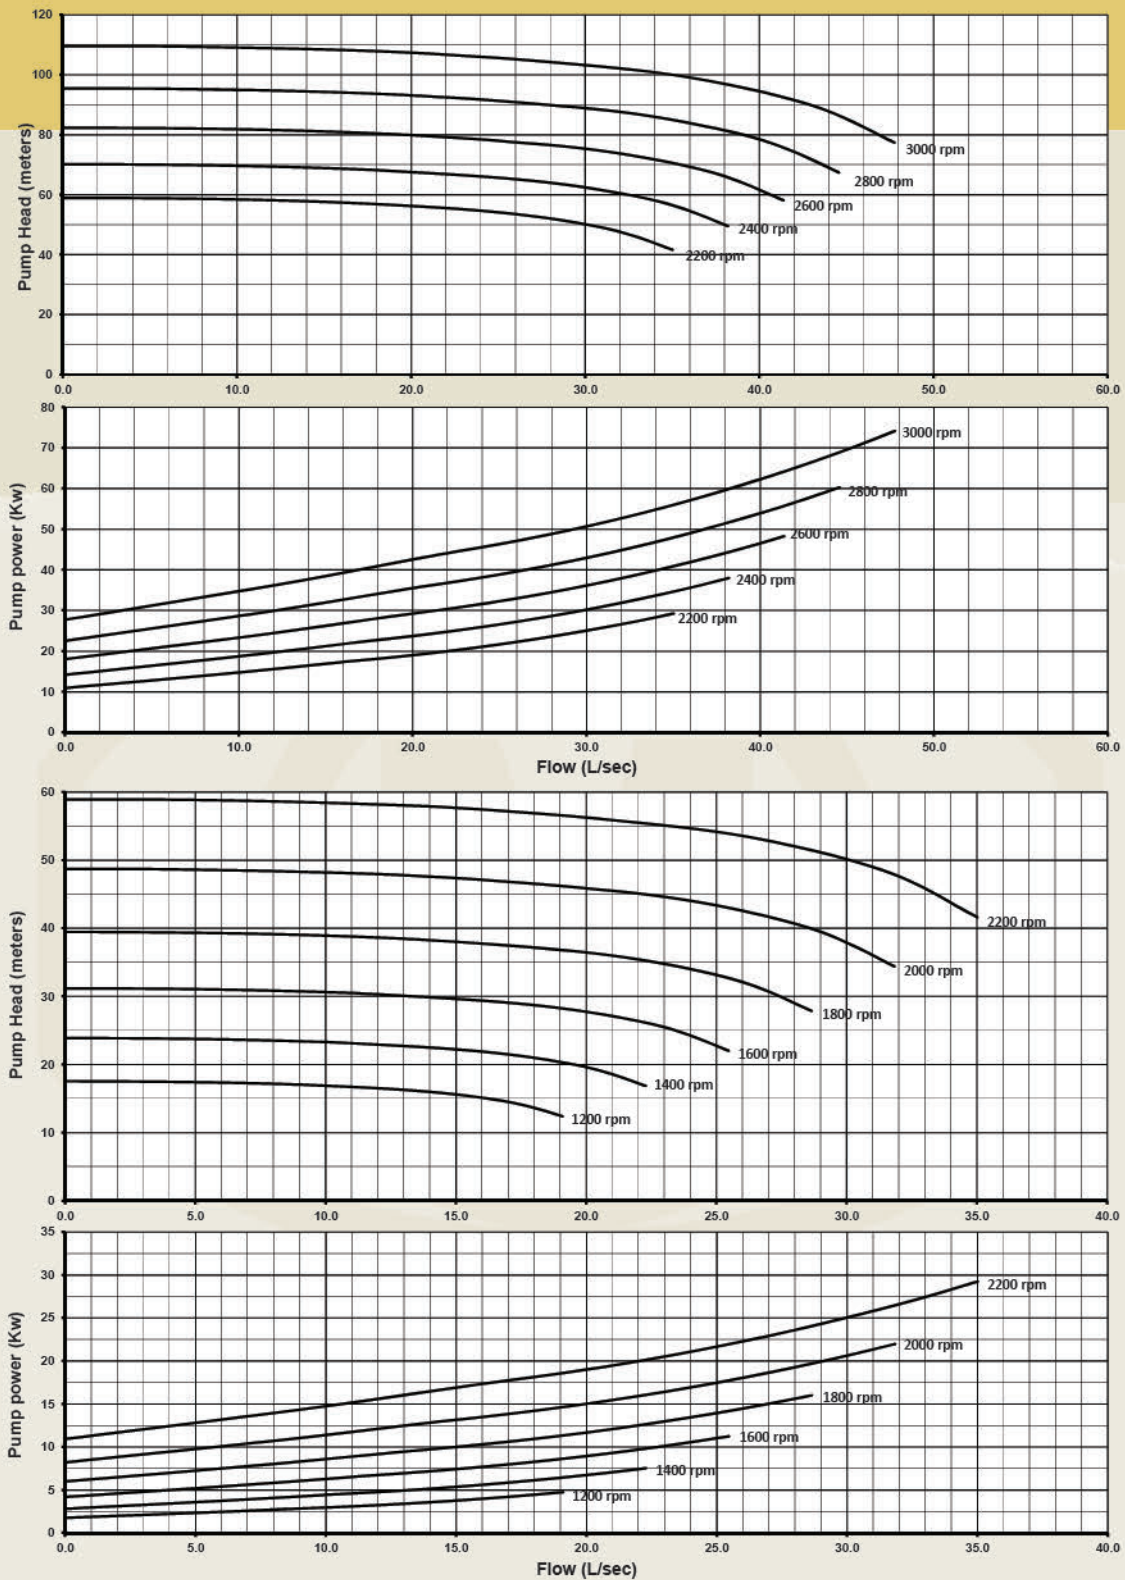

- Water Truck Systems • Pressurisation Systems • Fluid Transfer Operations
- Agricultural Irrigation • Mechanical & Industrial Services • Commercial Water Supply
- Dust Suppression • Firefighting

Why Choose Magnum?

- **Proven Australian Engineering** - Designed & supported locally for tough Australian conditions.
- **Rugged Reliability**- Built with industrial-grade materials for dependable performance in challenging environments.
