

FUSIONTUFF™ TANKER

PLASTIC TANKER

At just 30–40% the weight of a comparable steel tanker, the Tanker is up to 70% lighter.

This translates into real savings and improved efficiency across your fleet.

**Stronger
Smarter, Safer**

Revolutionising Tanker
Safety, Stability
& Efficiency

Magnum Australia is proud to introduce the New Patented FusionTuff™ Tanker

Revolutionising Tanker Safety, Stability & Efficiency

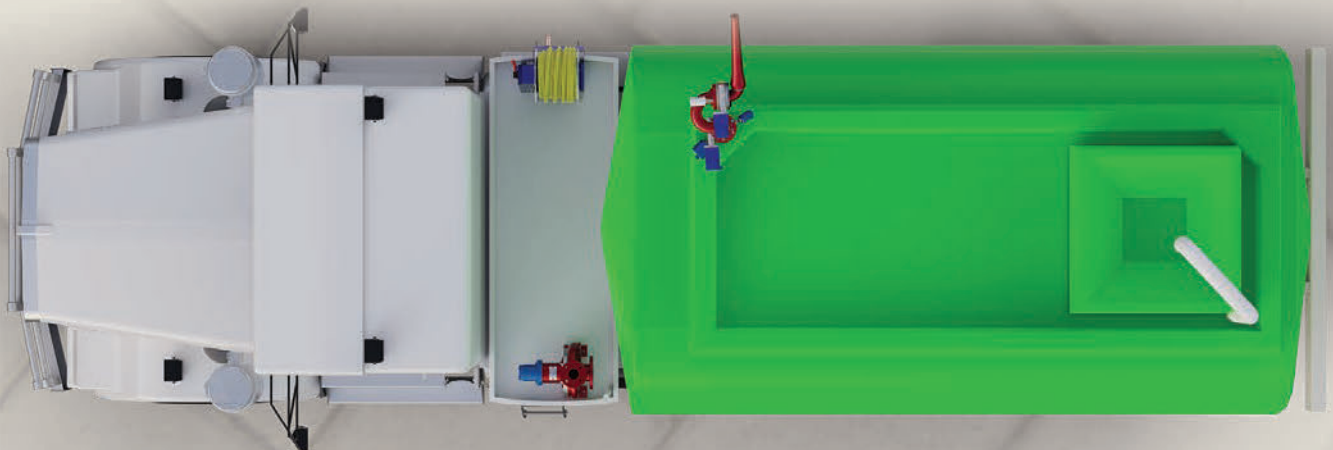

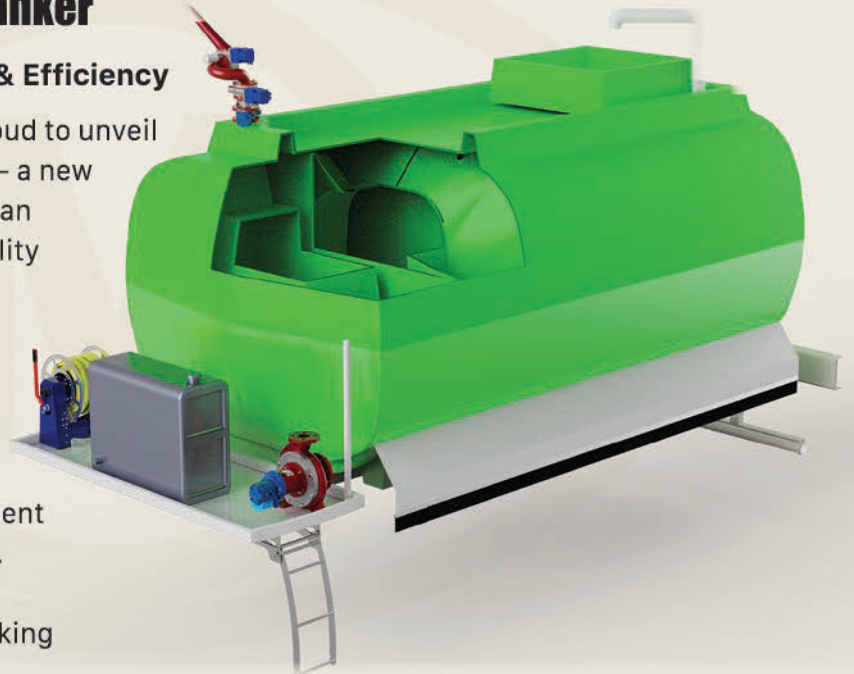

Innovation drives everything we do. We're proud to unveil the latest breakthrough in tanker technology - a new patented ultra-stable plastic tanker that sets an entirely new standard in performance, durability and operational safety.

- **Unmatched Stability**

- **30 Compartment Baffling System**

Engineered for the harshest operating conditions, this advanced tanker is equipped with a revolutionary 30 compartment internal baffling system — an industry first. This precision design provides unparalleled fluid control, reducing surge, improving braking and delivering superior handling.

Unlike conventional tankers, our unique horizontal baffling configuration tackles the often-ignored challenge of unstable half-loads. By effectively limiting upward water movement during braking and cornering, the tanker's centre of gravity remains consistently low, significantly enhancing road safety.

FUSIONTUFF™ TANKER

- **Built Tough – Engineered for Endurance**

Constructed from Ultra-High Molecular Weight Polyethylene (UHMWPE), the Tanker is built to endure.

This material offers:

- Exceptional impact resistance
- Full corrosion immunity
 - zero rust, zero compromise
- Easy field weldability and repairability
 - for faster, cost-effective servicing

- **Lighter by Design – Smarter by Performance**
At just 30–40% the weight of a comparable steel tanker, the Tanker is up to 70% lighter, delivering tangible operational advantages:

- Increased payload capacity
- Reduced fuel consumption
- Lower maintenance on vehicle driveline & suspension

- **A New Benchmark in Tanker Technology**

Whether you're transporting water, chemicals, or industrial fluids, our patented Tanker redefines what's possible in tanker safety and performance. We believe this innovation represents not just a step forward, but a transformational leap in tanker design. Let us show you how it can enhance your operations.
